Diseases of the senses of smelling
taste & touch & on the diseases
from cold - heat & famine.

Diseases of Senses of Smelling - taste &
Touch.

V 111. There is a disheping sensation
from certain Odors from Idiosyncrasy.
~~It was~~ as of Chuse - Cats - ^{onions} and ~~etc.~~
^{magnolias.}
It is to be cured by gradually accustoming
the nose to them.

U Sensibility from Idiosyncrasy to certain
Aliments - ~~from nature - and from Surfeit.~~
~~particular~~ It is often induced in boarding
Schools from living too constantly upon
One kind of Aliment. It ~~was~~ is hereditary in
some families to certain Articles of Diet &
lastly it is bro't on by Surfeit. It is to be
overcome by resolution. Sometimes I
~~know this from experience. All my~~ know
this from experience. I was surfeited when
a child by eating boiled Chesnuts. Until I was
22. all my Senses revolted against ~~them~~ ^{not only} the
small taste - ~~and~~ but the touch were distreping
to me. Overcome by resolution - I now can eat
them. There is likewise a ~~viti~~ saline-

17
of Smelling

It is 1 com.

& There is an absence of smell. It is
- genial. This was the case in the famous Liverode,
induced by 2 Catarrh. 3 Ulcers in the nostrils.
Indisio.

and by palsy. The Remedies sh^d be for
Catarrh - vs or purges for Ulcers - low
diet - Calomel internally & Ung^t Citrinum
from palsy - Stimulants - such as Isthmus
volatiles &c. Vapor of hot Vinegar.

If There is a distorting perception of fatid
Smells. ^{real, &} If from Ulcers - ^{which they should} to be healed, - if
false perception - by remedies w^h act locally & generally
from ~~general cause~~ - ~~general remedy~~

V
of Taste

An Absence of
~~It~~ often occurs after fevers. I have never
known it a chronic disease. It generally
goes off of itself. But there is a morbid w^h
of Touch

We sometimes meet with exup. and
defect of sensibility & irritability. The exup.
It occurs in various diseases certain fevers
to be cold, & heat, and is to be cured by

a sweetish

also a taste of smoky water -
or a bitter taste, in the mouth which imparts
the natural taste of food. Often originate
in the stomach - ^{when} ~~whether~~ they are to be
corrected by vomits - Ristors - Odilents -
- If in Salivary glands - by detergent,
or astringent mouth waters.

to prepare of even a piece of linen - It
 & yields to certain positions of the body &
 limbs - It yields to the Remedies for fever -
 - when of a Chronic nature, it should be
 treated by depletion, & afterwards with
 tonics. A want or absence of feeling oc-
 -curs in acute diseases, and is ^{likewise} of a Chronic
 nature. It appears in insensibility to
 fire - hot water - and even pins run into
 the body. — The remedies such as are
 common for it in acute diseases - and
 tonics ~~who~~ frictions with other tonics
 when it is of a Chronic nature.

~~Receipt of ~~drugs~~~~

Pain is sometimes felt in the
 fingers from certain substances coming
 in contact with them, by a peculiar
Idiosyncrasy. I have known a man who
 could not bear to handle a peach. This

+ The Turban is used for the purpose of
protecting the head from the intense heat
of the sun in Egypt. It excludes by its numerous
folds the external heat which is often 108 &
subjects the head to ^{its own} heat of ~~the~~ ^{the} body only ^{which} is
96 or 97. The Spaniards protect ^{their bodies} themselves in the same
way by a thick covering in hot weather. The high crown
hat with handkerchief in its crown - very useful. my practice
✓ to excite a sweat when the skin is dry -
walking down a hill -

13
Diosyncrasy like all others may be
cured by resolution. ~~I omit this from~~

~~except~~ As heat & cold act primarily on
the sense of touch - I shall speak of the
means of obviating preventing, & curing
their morbid effects. —

1 To prevent the morbid effects of ^{solar} heat,
the following means have been found useful.

1 Dress accommodated to it. White to be
preferred especially on the head. +

2 never to stand still in the sun. v

3 To drink as little as possible in the
forenoon - The Indian practice. The same
practice in Egypt - Sir R Wilson
4 To ~~never~~ never to drink very cold water.

David Evans's practice.

5 To ~~hide~~ sit in a room kept ~~co~~ ^{or smaller}
exclude heat from houses by closing
windows & shutting out light - The fewer
windows - & the larger a room the better.

St Paul's Church 8th degrees colder than
other houses in London. Ice as mentioned by
sitting near a chimney. Carr.

IV Bassus. cool air - cold water - Lead
water in quantities of bread & milk - Ung^{ts}
Stramonii. - vs: purging - low diet
when attended with fever. —

+ Lothura maria lived to be 90 did it from
a youth. Mr Jeff^{rs} & c practice.

To sleep on ^{large} mattresses ⁴ 20

To sit still when nothing to do.

When disease is induced - the Remedies
are. 1 ^{vs.} 2 pediluvium - or warm Bath.

Bruce's practice.

3 Cool Air Artificially obtained.

~~2~~ 4 Stimulants - to the nose, feet,
and when practicable - to the mouth.

the morbid effects of

To prevent Cold the following

means are proper. 1 Strong Coffee, or

1 a full meal, ^{the moderate use of} ~~the moderate use of~~ ^{distilled liquors.}

2 Protecting the feet - Coldness of which
induces disease & death begins in them. Socks
of woollen overboots - toes over stirrups -
motion to be allowed to the feet in shoes
or boots. washing them every morning in cold ^{water.}

3 Protecting the hands by gloves with
hair, or flannel.

4 Protecting the ears by a fur Cap. —

+ Ten articles of dress left at a door by a
young gentleman - Two pair of gloves - two
boots - two great coats - a cane & hat -

✓ Disease from Famine & thirst

Its ^{of famine} symptoms are, great pain at first -
fever -
Afterwards less - Diminished exertion by
cold feet - faintness - prostration - a
stool - ~~fever~~ - ~~debility~~ & ~~death~~ death
Disposition to weep - ~~disordered moral faculty~~ -
~~occurs sooner or later according to circumstances.~~
~~Persons who labor under thirst~~
~~& a disease protracts life, longer than a disease~~
~~live longer than persons in health. The~~
~~disease acts as a stimulus. Recollect Mr.~~
~~Howards case - 60 days -~~
2 persons who desire life longer than
persons who ~~despair soon~~ ^{prompting to}
~~thief - and cruelly - even to murder - swelled &~~
~~eyes suffused with blood - a dry - and~~
~~contracted skin & sometimes a yellow skin~~
~~- delirious perceptions - so much that all~~

- 5 ~~to~~ protecting the whole body with thick clothing. Auer's facts at Stockholm & avoiding fires, in travelling, when not very cold. practice in Canada.
- 6 Sleeping in a large bed, with warm feet.
- 7 Auer's facts in Lapland shivering. extreme heat of baths destroys sensibility to cold.
- ~~The~~ remedies for cold when painful or morbid are

- 1 Cold water - is warm compared with the limbs.
- 2 but applied to the breast. M Wardy's fact. —
- 3 Lobelia. —
- 4 ~~frictions~~ when torsid effects are ind? moderate warmth & gentle frictions.
- 5 when ~~morbid~~ inflamⁿ or mortification the usual remedies for them.

✓ Salt water, or Salt added to water sailors
Don't take cold from former

= Objects appear yellow or green - and the sweetest perfumes ~~can~~ exist a fatid smell. To these symptoms succeed Delirium, - an absence of appetite & even a disgust of food - & finally Death. — The time in which ~~Death~~ occurs is influenced by the following circumstances.

1 The time of life. Children perish sooner than young people - young people more than persons in middle life, and persons in middle life more than old people. ~~This under special circumstances is varied by the other~~

2 The existence of disease or morbid excitement in any part of the body. Recollect the fact of Mr. Hancock of Virginia who lived without eating 60 days. He laboured under a disease in his head

from a palsy.

3 The Desire of life. Attilius died on the 5th Day after he subjected him to voluntary famine. It was in him an act of Suicide — but there are many instances of persons living much longer under the same circumstances when the system is under a vehement love of life.

4 The Famine is sustained ^{much} longer where persons drink than when they do not. Morgagni mentions an instance of a woman who lived 50 days without food, by drinking water twice day, & Redi says he found by experiment that fowls that were deprived of water lived but 9 days, while those to whom he gave water lived above 20 days. ^{He found that the fowls in part} ~~unreachably~~ ^{unreachably} while. It is from the effects of liquids in obviating the effects of ~~famine~~ abstinence

25. in fivers
from food that patients live so long
20-15 - seven 20 Days without eating. Their
disease favours ~~the~~ the continuance of life
the water in all these cases acts by obvi-
-ating asphyxia, & by affording a small
portion of nourishment to the body.

If the exposure of the body to the open
air a girl lived 11 Days under ground
with a small communication with the
air, after the great earthquake of Calabria.
The negro man who was gibbeted alive in
South Carolina ~~lived~~ ^{ok} during the season in w^{ch}
the Dews fall plentifully lived ~~was~~ about 7
same time. The ~~no~~ prolongation of
life in all these cases is to be ascribed
to the water inhaled by the lungs. This
is so considerable in some cases
